

NEW FEATURES IN **FOUR.C DISPATCH 3.7**

Four:C Dispatch is a module based computer aided dispatch solution developed for mission critical applications.

Release 3.7

Create task from hotkey

A task can be used as a template for new tasks that can be created from hotkeys.

Easier to create tasks

Simple tasks can be created with minimal dialog for even faster creation.

Improved Call Out management

Response is logged with task and status codes are interpreted.

Talk group list can be tailored

In earlier version talk groups mirrored the radio programming. Now they can be saved and reorganised.

Button for DMO On/Off

-

Hotkey for talk group selection

-

Receive SDS/Status on radio 2 and 3

-

Improved Geofence

Geofences can be applied to specific contacts. A geofence can be updated with a contacts current status.

Fetch location without remote control

Ask a terminal for GPS location even if terminal does not have remote control license, i.e. other brands than Motorola.

Status as HomeMode display

A contacts status can be sent as HomeMode display when updated.

Nested contacts

Contacts can be connected to enable joint location tracking. When connected to a "parent" the contact follows the parent on the map.

Group text

-

More...

**Draw in task feature can use symbol library**

All symbols can be used when drawing in tasks. Previously only available for "points of interest" och notes.

**Four:C Dispatch upgraded to 64-bit application**

Enables application to use more ram thus improving performance, especially when managing heavy maps.

**Carmenta Engine upgraded from 5.7 to 5.12**

Improving both visuals and performance.

**Support for Swedish "First responder map"**

The dispatchers active includes the add-on "geopackage-files" that for instance is used in the first responder map.

**Status from SDS**

SDS can be used as a status in the systems.

**Faster connection to radio**

Improvements in the initiation of connected terminals to enable higher connection speeds.

**Light indicating talk group activity**

It is possible to configure a relay to indicate on-going calls through for instance an external light. This also has a configurable delay before the relay/light turns off.

**Incomming FLASH-SDS displayed in messages**

Clear indication of this type of message.

**Rejected individual calls can be answered with Flash-SDS**

The ability to reject individual calls (from 3.5) has been supplemented with Flash-SDS responses.

**Show location on more websites**

A location or contact can be viewed on more websites/services. Support available for Google Maps, Hitta.se och Eniro.se but is configurable.

Radio supports "no talkgroup"

Radio can be set to "No talkgroup".

**Minor corrections and improvements**

Many minor corrections and improvements have been made.
