

AN UPDATED PRODUCT VERSION WITH A NEW NAME LAYS THE FOUNDATION FOR OUR NEW LINE OF MANAGEMENT SUPPORT SOLUTIONS.

The Four:C Family is a collection of applications and services with the purpose to streamline resource management within organizations where reliable communications and control are critical to operations and/or worker safety.

From start the family will consist of the dispatch solution that has previously been known as Celab Operator Platform. But with the upcoming generation (3) it will instead go by the name Four:C Dispatch.

Off course it is not only the name that has changed but the solution has also been significantly improved. It has for instance been equipped with a more powerful map module that can handle virtually any kind of geographical data. This lets organizations load maps they have created themselves or bought.

Four:C Dispatch can also position multiple resources in real-time which together with the possibility to handle incoming alarms from PSAPs and other sources provides conditions for smooth resource management in a drag and drop environment. Today the solution can also be supplied with a synchronization server that allows multiple operator to share information continuously.

All upgrades are optional, which allows organizations to customize functionality completely according to their needs and budgetary restrictions.

The dispatch solution will now share its name with our mobile task management solution Four:C Mobile, that after its upgrade earlier this year also is a part of the product family. Since they now provide synergies to the extent that they are rather a part of the same concept than stand-alone products it seems natural that also should share the brand, Four:C. Or, Celab Command and Control Concept which it also stands for.

Soon we will also be launching a third member of the product family. Namely, a cloud-based service that go by the name of Four:C AVL. Keep an eye out on our website for more information.
