

Management support solutions from Celab now certified for use in the Danish communications network SINE.

During an intense couple of days in the testing environment at Dansk Beredskabskommunikation A/S the solutions within our Four:C product family went through the certification process with flying colours.

From the 19th of august our solutions for mobile and central command can be procured, installed and operated in the Danish communications network for the public safety sector. SINE (SikkerhedsNET/Security Network) is a nationwide two-way radio system based on TETRA technology from Motorola Solutions and is used by law enforcement, emergency services and selected organisations important for the nations preparedness.

The now certified products are, the operator platform Four:C Dispatch and the mobile task management systems Four:C Mobile (Actis and Windows). The approval regards the latest version of the software, respectively (se official certification documentation).

The applications are today used by several customers in the RAKEL network, the Swedish equivalent to SINE. The task management solution is installed in over 300 emergency vehicles nationwide and the dispatch solution is found in close to ten command centres within emergency services and public transportation.

About Four:C Dispatch

Scalable computer aided dispatch solution for managing and monitoring resources. The system provides dynamic map support, communications management in SINE and RAKEL as well as excellent possibilities for integrations and telemetry.

About Four:C Mobile

Mobile solution for task management/job ticketing and status reporting with navigation built-in. Available for the Actis navigator and Windows Tablets (Win 8 & 10).
